

Translation Playbook

Your Role:

- You are **conducting research** to support **production** of client workshop materials, including activity research, facilitation guide, etc.

Your Audience w/r/t this **Translation Playbook** document:

- Primary - **Mellonhead facilitators** that will leverage research materials to produce final client deliverables (workshop deck, resource, etc)
- Secondary - Mellonhead enterprise **client end users** who will consume workshop materials

How To Use This Document:

- Step-by-step guide to **transform** activity research into **final workshop deliverables**

Facilitation Guide

Design each Activity to include the following components:

- Input
- Prompt
- Output
- Follow-up prompt

Activity Research → Talking Points

- **Break up compound** sentences (e.g., a sentence has multiple clauses separated by commas or semicolons)
 - One limitation/idea = one bullet point
 - Each bullet must stand alone (facilitator can skip or emphasize independently)
- Maintain **scannability**
 - Keep bullets short (10-15 words maximum)
 - Avoid cross-referencing (e.g. “as mentioned above”) → facilitator should be able to read any single bullet without context
- **Quality check:** Read each bullet aloud. If you:
 - Stumble on phrasing → simplify
 - Need to reference another bullet → make it standalone
 - Feel it's explaining rather than directing → cut explanation, keep action

 Example (compound sentence):

- Activity Research: "summaries may miss nuanced context, cannot access external links/attachments, might misinterpret tone"
- Talking Points:
 - "Summaries can miss nuance; for exact wording use "extract specific parts of the email" or "maintain original language"
 - "Tone can be misread"
 - "Copilot is not reading Attachments and links"

Best Practice: Demos

Consider:

- Level of technical complication: Can this activity reasonably be completed in 20 minutes, accounting for questions, etc)?
- Org/team sensitivity: Does this activity touch upon any internal sensitivities? Would this cause any type of distraction?

Don't design activities that have high potential to have wrenches thrown into it! Too complicated, relates to a sensitive topic.

Universal approach

- Be mindful about specific team sensitivity around subject matter (AI)

Role-Based Resource

Structural Template

1. **Opening problem statement:** 2-3 sentences framing the pain point in the user's world, not in AI terms.
2. **Key Mental Shift:** A single reframe idea in a callout box. Offers a suggested way to rethink how one might normally approach the activity.
3. **Approach:** Numbered list, presented in simple diagram flow. Each step expanded in detail beneath.
4. **Sample Prompt:** One full-length, role-grounded example.
5. **Pro Tips:** Tactical (not conceptual) advice to generate better results.
6. **Limitations:** Honest, specific failure modes - what the tool actually can't do well and why.
7. **Refining Your Results:** Diagnostic questions framed as "Ask yourself..." each paired with a prescribed next step

Tone & Voice

- Peer-to-peer, not instructional

Mellonhead

- Problem-first: name the operational headache before introducing the solution
- AI is never the hero - the user's outcome is

Assumed Audience

- Time-scarce and output-oriented
- May be skeptical of AI hype - possibly been burned by overpromising tools
- Sample prompts must anchor in a believable role-specific scenario - generic prompts signal the facilitator doesn't understand the audience

Do/Don't Formatting

- Use to correct anticipated misuse without lecturing - show the gap rather than describe it
- Apply wherever a user might default to the wrong mental model

✓ "Emails from John Doe in Q4 about the board presentation"

✗ Not: "emails with the word 'board'"
